

Scheck Team Beats **Aggressive Schedule**

Scheck Mechanical recently completed installation of the HVAC Piping Systems at the Hospira Technical Center Building H3. Hospira is a specialty pharmaceutical and medication delivery company launched from the core global hospital products business of Abbott Laboratories. The owner had an extremely aggressive construction schedule for the 200,000 square foot “grassroots” research building. From ground breaking to start-up, the total project duration was 10 months. The scope of work included the installation of a new chiller and boiler plant. The job site had up to 300 craftsmen working in the building simultaneously, requiring extensive scheduling and coordination with other trades.
